WIOT MANAGER

Brochure

English

WIOT Manager

Full control of your devices

Transformation of water management towards sustainability has found the need of having the updated data for detecting possible problems or to be able to make real-time decisions based on data to optimize the resources.

In Fivecomm, we are concerned about how important it is to take care about water in today's world. For that purpose, we are thrilled to present the WIOT Manager, a centralized platform that allows you to monitor the information of all your WIOT devices and manage the assigned meters, optimize how meter readings are distributed across the WIOT network to ensure maximum efficiency of Fivecomm's solution and contribute significantly to smart and sustainable water management.

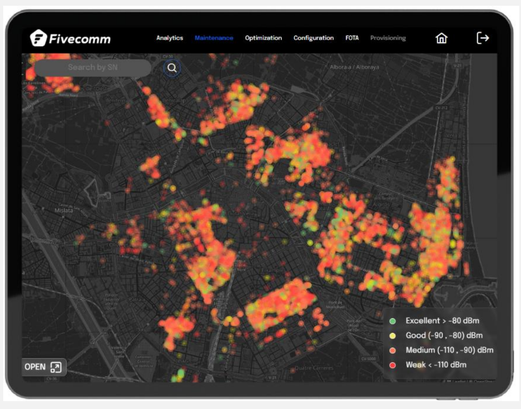
The digitalization of water is here.

Applications

Take the control of your WIOT devices with the WIOT Manager.

– Monitor

See how the deployment is behaving and monitor any potential breakout

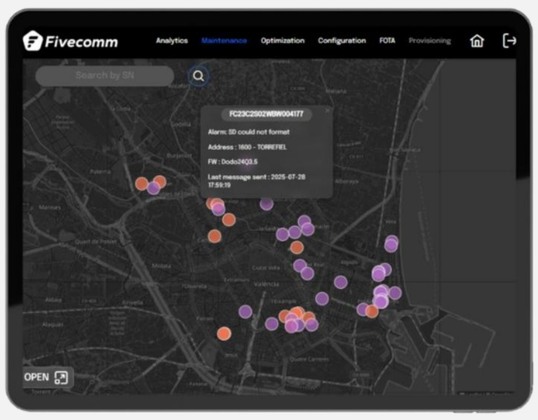


– Optimize

Reconfigure the parameters to optimize the performance of the deployment

– Maintain

Get early information for maintaining the network before a device runs out of battery or any problem is detected



Sections

- **Dashboard**. Directly visualize your meter data and the status of your IT systems in a simple dashboard.
- **Analytics**. Monitor the performance of your WIOT deployment by seeing insightful analytics.
- **Maintenance**. Maintain your deployment by checking alarms, battery and coverage status. Get notified if any problem arises.
- **Optimization**. Get advice to optimize the performance of your network by reconfiguring the parameters and even physically relocating the devices.
- **Configuration**. Configure all your device in batches or individually.
- **FOTA**. Perform firmware updates with just a click.
- **Provisioning**. Easily add new devices to your network.
